

Water Stripper Conveyor

Using our Water Stripper Conveyor is a great way to case pack without running product through an IQF

How It Works

As product is conveyed through our Water Stripper, it is gently rolled and thoroughly stripped of water by the 2 air knives inside of each mounted dryer box (6 air knives total with 3 dryer boxes) - Each dryer has height adjustments so you can easily adapt to the amount of product being pushed through the line. As wet product is carried over the conveyor, 4 separate brushes, located underneath the belt, help wick water away from the 33" wide x 12' long conveyor. The Water Stripper works extremely well when put behind an LPM Dewatering Shaker Table

Available Options

- Standard conveyor is 33" wide x 12' long, but custom length conveyors are available
- Variable speed controls (shown below)

Features

- Stainless steel wire belt
- All stainless steel construction / stainless motor
- Wicking brushes are mounted in UHMW blocks, and are easily removable for cleaning or replacement
- 3 HP motors are mounted on each dryer box
- Telescopic adjustable height legs

Single Air Boxes are also available and easy to mount to an existing conveyor!
