

## Econo-Grade

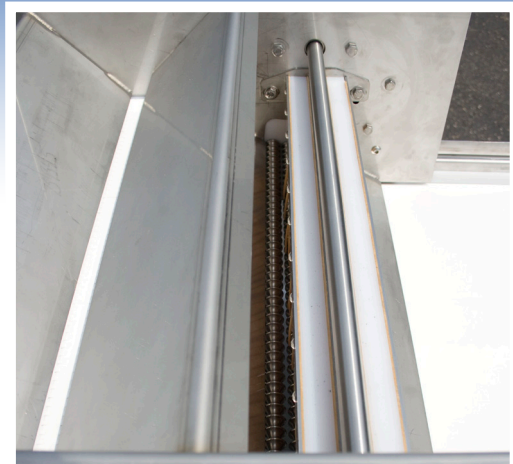

*Designed for smaller packing facilities running lighter volume of berries / Used for sorting out small berries / chaff / leaves, and other unwanted debris from product.*

### How It Works

A metering hopper conveyor feeds berries onto the profile roller bed which has openings for small berries and debris to drop out. Large berries flow across the roller bed onto the manual inspection conveyor, and large defect berries are manually removed from the inspection conveyor. As defect berries and debris are removed, they are placed into trash lanes on either side of the conveyor, and conveyed into lugs held underneath the inspection conveyor.

### Available Options

- Additional sets of spools
- Custom sized spools for customer specific sizing requirements
- Custom conveyor lengths

### Features

- All stainless steel construction
- Precision machined spools ensure exact diameter sizing
- Sizing section of this piece of equipment mounts directly onto the inspection conveyor
- Telescopic adjustable height legs
- Includes Lug Rack to catch disregarded berries and debris
- Easy wipe-clean design (Trash lanes and main conveyor all on same belt)
