

HIGH-SPEED SINGLE & MULTI-HEAD FILL-BY-WEIGHT BULK BOX FILLERS

LAKWOOD Drop-Thru Box Fillers

- **Non-stop filling process**
- **Washdown design allows for easy cleaning**
- **High accuracy fill weight achieved by two-stage filling mechanism**

The multi-head box filler is a versatile component for your packing needs. It's automated design ensures accurate fill-by-weight discharge. Available with 1 or more filling stations, it is designed to fit your daily volume and filling requirements.

Product is conveyed into a filling hopper where it is then discharged into the container. Empty containers are automatically fed into the filling station, allowing each station to operate independently. This also allows different products to be filled at each station simultaneously.
