

BAG-IN-BOX CARTON ERECTOR

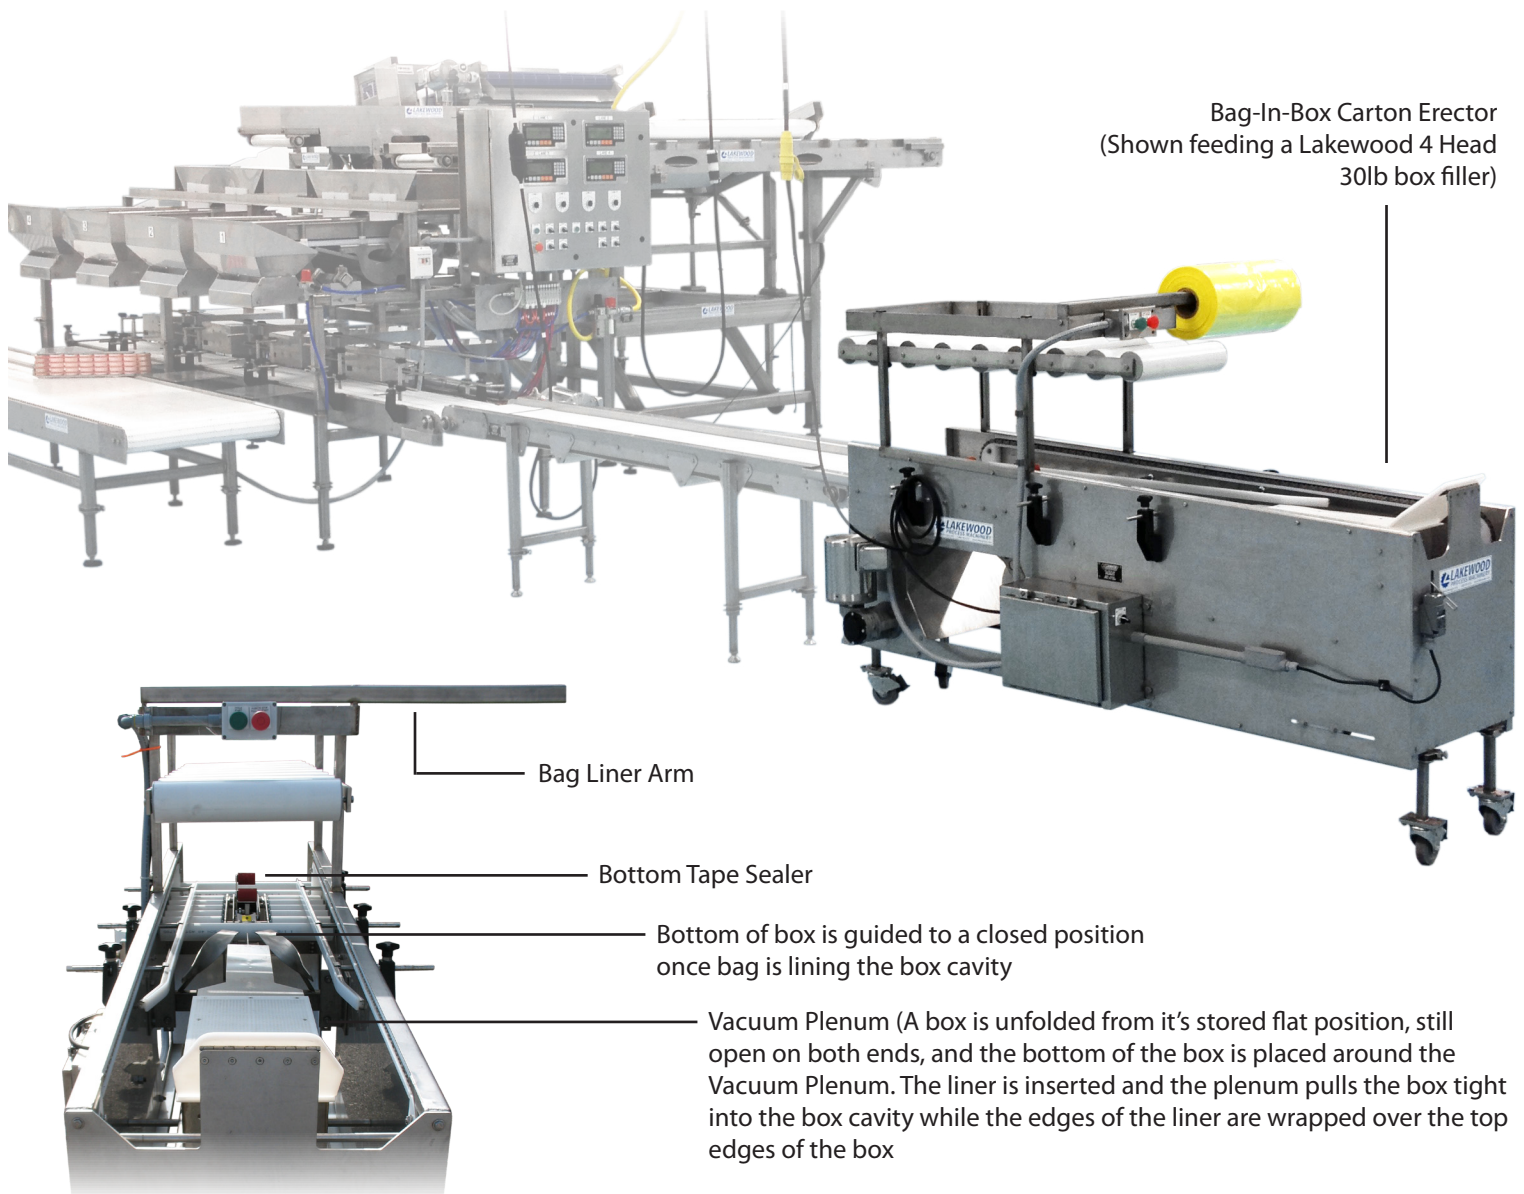

CARTON ERECTORS

CUT PRODUCTION COSTS AND TIME WITH A BAG-IN-BOX ERECTOR

Bag-In-Box Carton Erector

- Allows setup for multiple carton sizes
- Includes bottom tape sealer with box squaring drive mechanism, making a perfect box every time
- Vacuum plenum under box pulls the manually placed bag firmly into the box cavity, securing the bag in the box while the top of the bag liner is cuffed over the top of the box

Erecting boxes and inserting bags is often a bottleneck for processing lines. As a solution, Lakewood has automated this process to cut both product costs and time. Requiring only a single operator, the Bag-In-Box is an efficient and cost saving tool.

Bag-In-Box Carton Erector
(Shown feeding a Lakewood 4 Head
30lb box filler)

Bag Liner Arm

Bottom Tape Sealer

Bottom of box is guided to a closed position
once bag is lining the box cavity

Vacuum Plenum (A box is unfolded from it's stored flat position, still open on both ends, and the bottom of the box is placed around the Vacuum Plenum. The liner is inserted and the plenum pulls the box tight into the box cavity while the edges of the liner are wrapped over the top edges of the box)
